

ABSTRACT OF DISCLOSURE

An oven provided with a main body forming an oven compartment, and a door in contact with the main body to open and close the main body, the door including: an inner cover facing the oven compartment having an opening to show the interior of the oven compartment ; a transparent window in the opening of the inner cover; and a supporting member supporting the transparent window against the inner cover, wherein a window accommodating part is extended toward the inside of the oven compartment from the periphery of the opening for accommodating the transparent window. Thus, a fixing means such as a jig and liquid sealant used for providing the transparent window to the door of the conventional oven are not necessary in the oven according to the present invention. Therefore, assembling the oven can be simplified, thereby enhancing productivity.
